**SERVICE:** Recommended for service in cold and hot water, air, steam and some weak acids. It should not be used in strong acids, oils, grease and chlorates. It offers little resistance to ozone and the majority of hydrocarbonates. Not to be used for wastewater and sludge.

**GENERAL DESCRIPTION:** An economical, non-oil resistant compound that resists flow under compression. Offers moderate to good performance against low pressure and good aging, abrasion and tear resistance. Easily conforms to uneven flange surfaces.
