^{*} Slight deviation from the preferred number of teeth is permitted.

Description	A hardened circular washer with twisted prongs or "teeth" which extend out from the outer edge of the washer.			
Applications/ Advantages	This is the most preferable of all tooth-lock washers. It offers the greatest locking efficiency since the teeth are on the largest radius and provide greater torsional resistance.			
Material	Spring steel			
Hardness	Rockwell C41 - 47			
Plating	See Appendix-A for information on the plating of steel lock washers.
